

Canot Bridge, Besançon

The City of Besançon reduced its energetic bill when using LED projectors to up light one of the city's heritage since 1877, the Canot bridge.

They used 88x 5633-Arches LED linear light bars which produce a uniform lighting all over the bridge deck as well as each of the bridge girder.

All linear light bars are installed at 2,5 meters away from the bridge deck and positioned at a 3-m interdistance from center to center of the linear projectors.

Specifier: City of Besançon
